

Facebook Engineering

Bootcamp: Generalist path to work on Infra and Product related projects. All Generalist Software Engineers joining Facebook will enter Facebook through Bootcamp. They can choose the team after 6 weeks of in-depth learning and exploring.

Ads: Focused on creating meaningful connections between people and businesses via one of the world's largest advertising platforms.

Community Integrity: Aims to prevent bad experiences. Turns bad experiences into good ones by making people feeling secure, cared for, and satisfied while using Facebook.

Core App: Build the Facebook app, connecting almost two billion people each day with their friends, family, and the stories that matter to them most.

Dev Infra: Build tools, infrastructure and language runtime for web development – both in terms machine and developer efficiency.

Detection & Security Infra: Provide reliable, scalable, and perform core services to make all Facebook services secure; and protect user data from internal and external abuses and attacks.

Growth: Responsible for adding the next billion users with focus on emerging markets.

Instagram: Built to help capture and share the world's moments. Has played a critical part in forming meaningful communities where people can connect with each other.

Local: Powers the everyday lives of billions of people, through helping people discover local businesses and coordinate with friends; building business tools that save SMBs time.

Payments & Marketplace: Payments builds out the payments flows and infrastructure for Facebook. Marketplace enables small and medium businesses to showcase their products, for people to browse and buy on Facebook.

Platform: Aims to make internal services and frameworks as thin and easy to work with as possible for product teams so they can build fast, consistent, and reliable APIs for developers.

Search: Powers the online infrastructure of massive search application scenarios by building one of the largest distributed inverted indexes in the world, making it more scalable and reliable every day.

Services Infra: Builds large distributed components that run Facebook. Everything from scaling data storage, to synchronization and coordination of large server clusters, and to providing a runtime environment for front end.
